2.安装Pyspark虚拟环境连接pycharm

下载pyspark环境并连接pycharm

1、切换到pyspark虚拟环境,安装清华镜像源的pyspark

安装pyspark时候一定要进入到pyspark的虚拟环境中下载,

进入pyspark命令: conda activate pyspark

1.1、执行安装pyspark

pip install -i https://pypi.tuna.tsinghua.edu.cn/simple pyspark==3.2.4

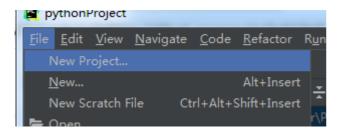

安装完成执行进入Python编译器,import一下如果没报错说明安装成功

```
Successfully built pyspark
Installing collected packages: py4j, pyspark
Successfully installed py4j-0.10.9.5 pyspark-3.2.4
(pyspark) [hadoop@hadoop007 sunyaxu]$ python
Python 3.8.16 (default, Mar 2 2023, 03:21:46)
[GCC 11.2.0] :: Anaconda, Inc. on linux
Type "help", "copyright", "credits" or "license" for more information.
>>> import pyspark
>>>>
```

1.2、主节点安装完成,其他两个节点同样方式安装(<mark>注意都需要先切换到pyspark环境</mark>),配置 完成记得验证。

2、配置pycharm连接Linux的Python环境

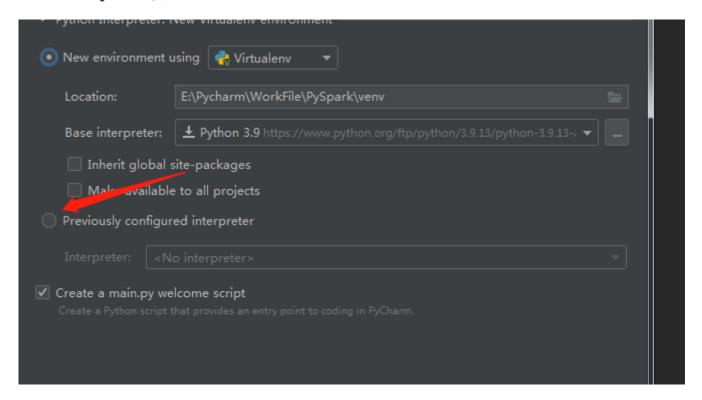

2.1、打开pycharm之后创建新的项目

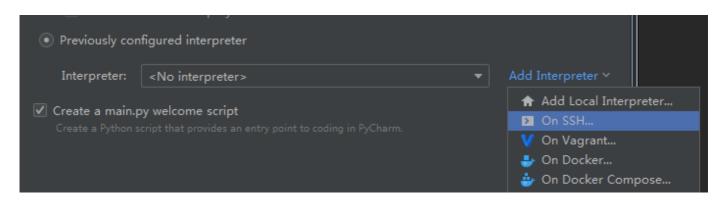

2.2、选择你项目存放的路径和名称

	Location: E:\Pycharm\WorkFile\PySpark	
	▼ Python Interpreter: New Virtualenv environment	
	New environment using	
ingine	Location: E:\Pycharm\WorkFile\PySpark\venv	
	Base interpreter: Python 3.9 https://www.python.org/ftp/python/3.9.13/python-3.9.13-; ▼	
	☐ Inherit global site-packages	
	Make available to all projects	
	Previously configured interpreter	

2.3、勾选Python环境配置

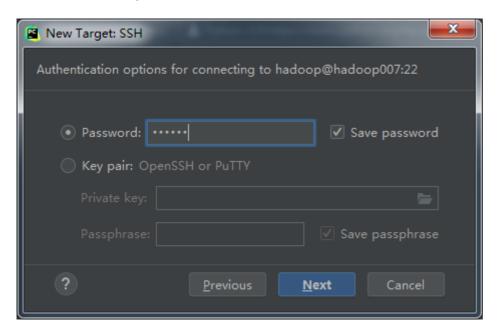

2.4、选择ssh连接我们的虚拟机

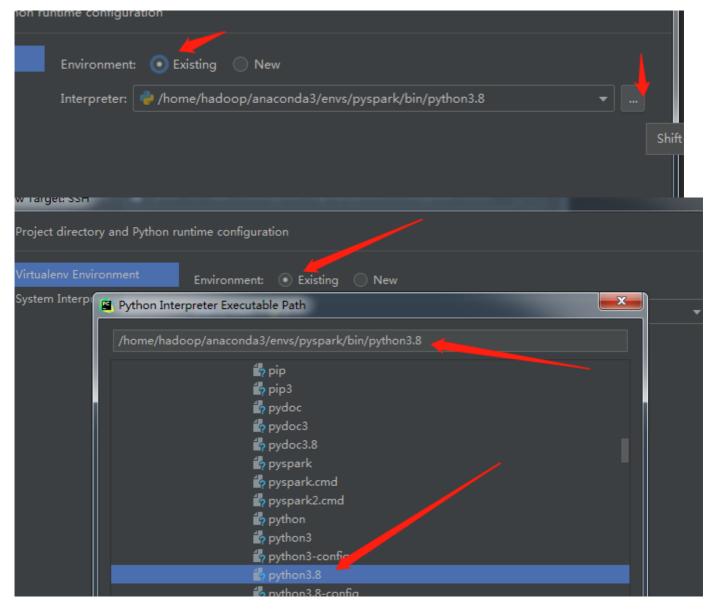

2.5、填ip端口号,类似于xshell的连接,填写主机名和登陆账号。

SSH connection:	New
Host:	192.168.10.100
Username:	hadoop

2.6、输入hadoop用户的密码,点击next

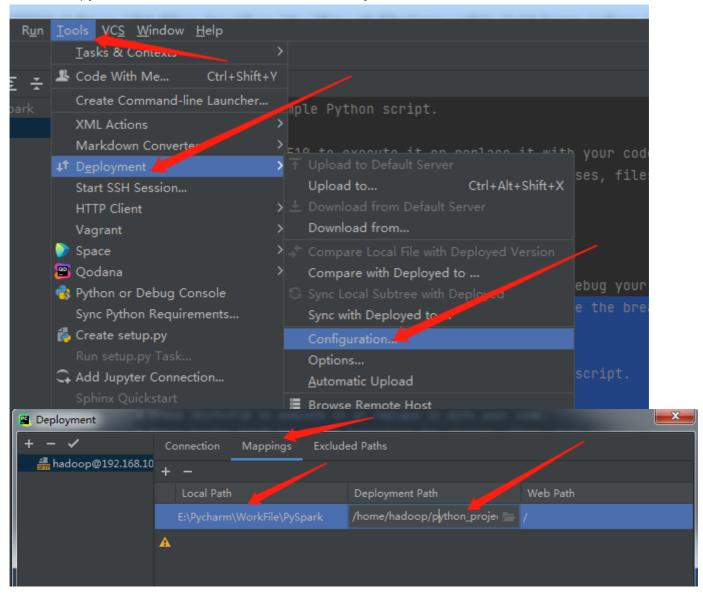

2.7、指定虚拟环境pyspark的路径,/home/hadoop/anaconda3/envs/pyspark/bin/python3.8

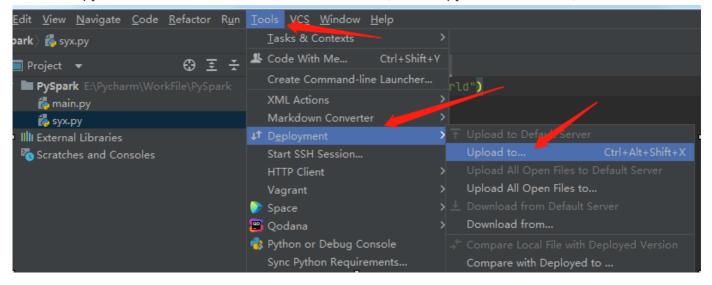

- 2.8、由于配置了连接远程Linux服务器,执行Python代码必定需要将代码同步到Linux环境执行,也就是说我们本地会有一份,Linux也会有一份。pycharm上带有自动同步功能,我们只需要进行一些配置即可。
- * 首先在Linux创建一个用于你存放Python代码的文件夹,我这里创建了一个python_project文件夹存放在了/home/hadoop/python_project路径上

total 0
[hadoop@hadoop007 python_project]\$ pwd
/home/hadoop/python_project
[hadoop@hadoop007 python_project]\$ |

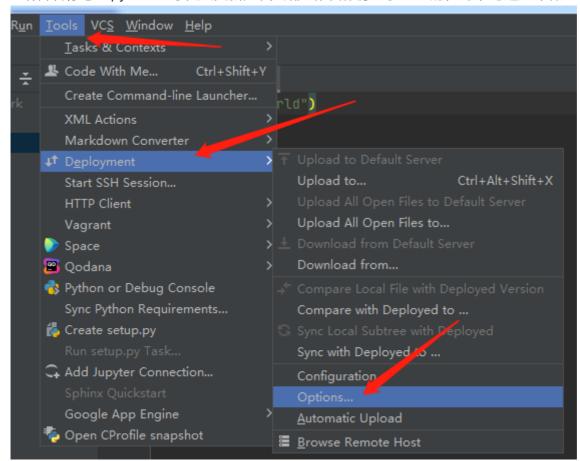

* 然后点击pycharm的工具配置中,配置Linux中存放Python代码的目录。

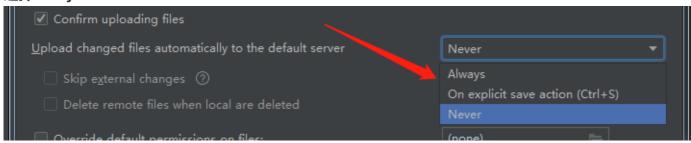

* 当以后在pycharm编写完代码想要放到Linux上执行的时候,点击pycharm一键上传即可

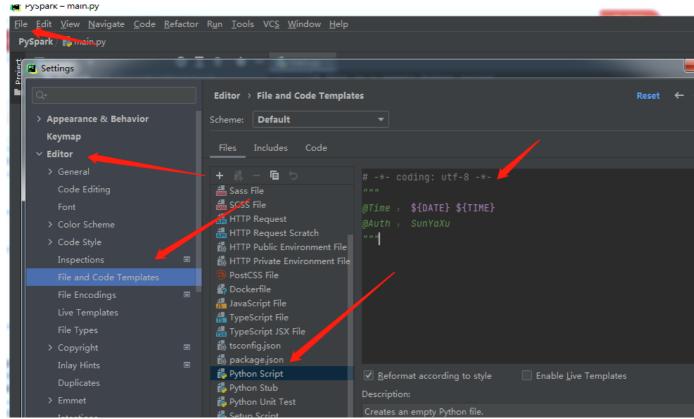

*或者说你想让pycharm每次只要新建代码都会自动同步到Linux的,可以勾选一下配置选项

选择always

3、配置项目开发者信息(可选项,提高代码可读性)

配置内容

```
# -*- coding: utf-8 -*-
"""

@Time : ${DATE} ${TIME}

@Auth : SunYaXu
"""
```

效果展示:

```
# -*- coding: utf-8 -*-
2 | | """
3 | | @Time : 2023/4/24 15:42
4 | | @Auth : SunYaXu
5 | | | """
```
